WORK EXPERIENCE

University of Florida	Gainesville, FL
<i>Enhancing Collaborator Communication in Extended Reality XR Research & Dissertation work</i>	<i>August 2024 - July 2025</i>
- Conducted extensive research developing shared-gaze visualizations for collaborative industrial tasks in augmented reality (AR) environments. - Designed and executed three colocated user studies (n=60+) to evaluate how visualization type, self-gaze, and environmental sound influence collaboration, social presence, and task performance. - Developed AR software prototypes integrating gaze tracking, real-time visualization, and user interface feedback to support natural interaction.	
<i>Enabling Knowledgeable Task Guidance in the Extremes (ENKIx) User Interface Designer</i>	<i>June 2021 - July 2024</i>
- Developed an AR prototype for context-aware task guidance using Unity and C#/.NET. - Implemented computer vision-based object detection with ArUco markers and designed interactive user interfaces to guide task execution. - Collaborated with cross-functional teams to integrate networking biometric components and align AR functionality with user research insights.	
<i>EMG-Based Prosthetic Simulation in Virtual Reality Full-Stack Developer</i>	<i>June 2020 - June 2023</i>
- Conducted a comparative study on cognitive workload and usability for training with electromyography (EMG)-based prosthetic devices using virtual reality simulations in Unity 3D versus physical devices. - Designed and executed experimental protocols, recruited participants, and collected quantitative and qualitative usability data.	
<i>Characterizing User Comprehension in the STIR/SHAKEN Protocol UX Researcher</i>	<i>June 2020 - June 2021</i>
- Conducted a human-centered study on user interpretation of STIR/SHAKEN Caller ID authentication frameworks aimed at mitigating robocalls. - Designed and executed surveys and interviews to evaluate consumer preferences and understanding of authentication states.	
<i>Multi-Modal Affect Detection Machine Learning Engineer</i>	<i>August 2019 - August 2020</i>
- Developed DNN models for detecting human emotions by fusing audio, images, and video data. - Designed and implemented feature extraction algorithms using wavelet transforms and preprocessed multimodal datasets for training supervised learning models.	

EDUCATION

University of Florida	August, 2025
<i>PhD, Computer Science</i>	<i>GPA: 3.6 / 4.0</i>
- McKnight Doctoral Fellow - Presented cutting-edge research at international conferences. - Competed in national collegiate road races and criteriums as part of the university cycling team.	

SKILLS

UX Research & Design: UI research & design; contextual inquiry; qualitative interviews; usability testing; wireframing & prototyping (Figma, Sketch)
Data & Analytics: Quantitative surveys; statistical analysis (R, Excel, Matlab; ANOVA, T-Tests, regressions)
Tools & Technology: Qualtrics; MTurk; GitHub; TensorFlow; computer vision; image processing; wearables
